PRECAST WALL SOLUTIONS

STRUCTURAL & CLADDING PRECAST SYSTEMS

STRUCTURAL PRECAST WALLS

Stubbe's Structural Precast Walls

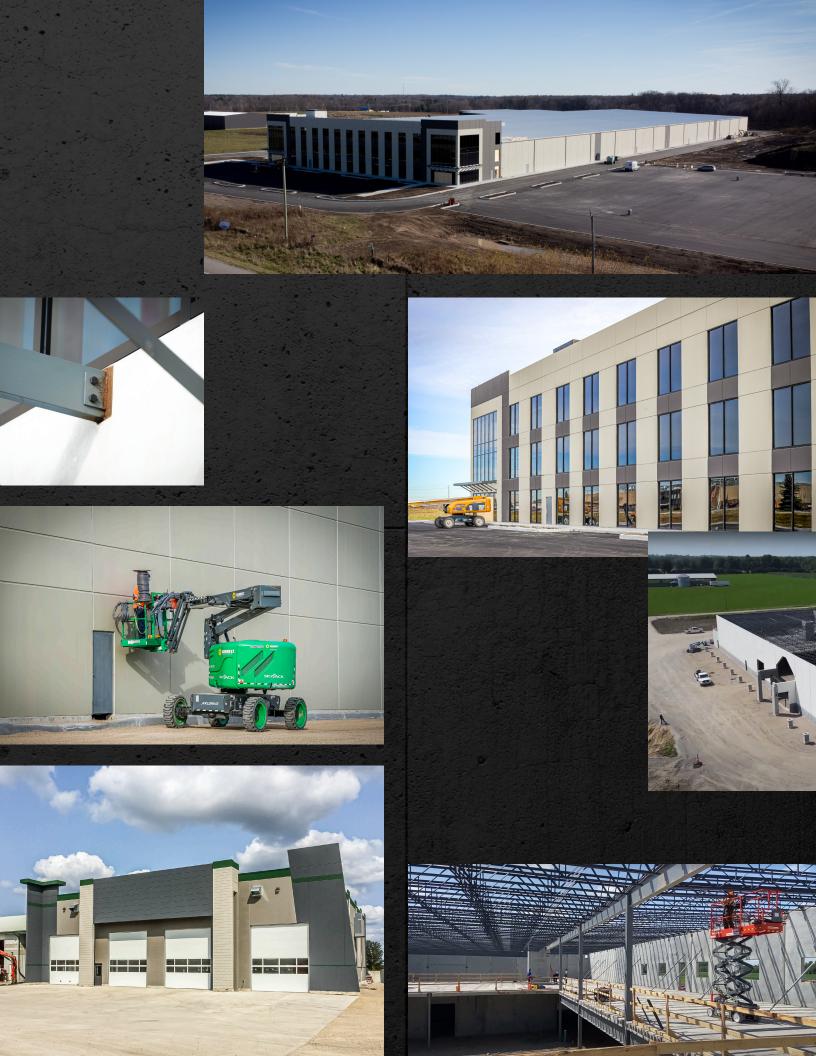

are a smarter way to build—combining strength, insulation, and interior finish into one streamlined system. Designed for high shear resistance and thermal performance (up to R-40), these panels help enclose your building faster and cleaner. Plus, by eliminating the need for perimeter steel, you get a cleaner interior finish and a more efficient construction process. Compared to tilt-up, this system reduces site work, improves aesthetics, and speeds up project timelines—all while simplifying coordination on site.

Benefits:

- Up to R-40 continuous insulation
- Shear-resistant for structural stability
- Interior float or power-trowel finish
- Faster enclosure, earlier interior access
- No perimeter steel = cleaner interior and more flexibility with spacing af openings
- One trade = structure + enclosure
- Union and non-union install options
- Shipped to site with factory painted first coat
- Using the structural walls to sustain design loads the structural steel design can become even more efficient

PRECAST CLADDING WALLS

Precast Cladding Walls

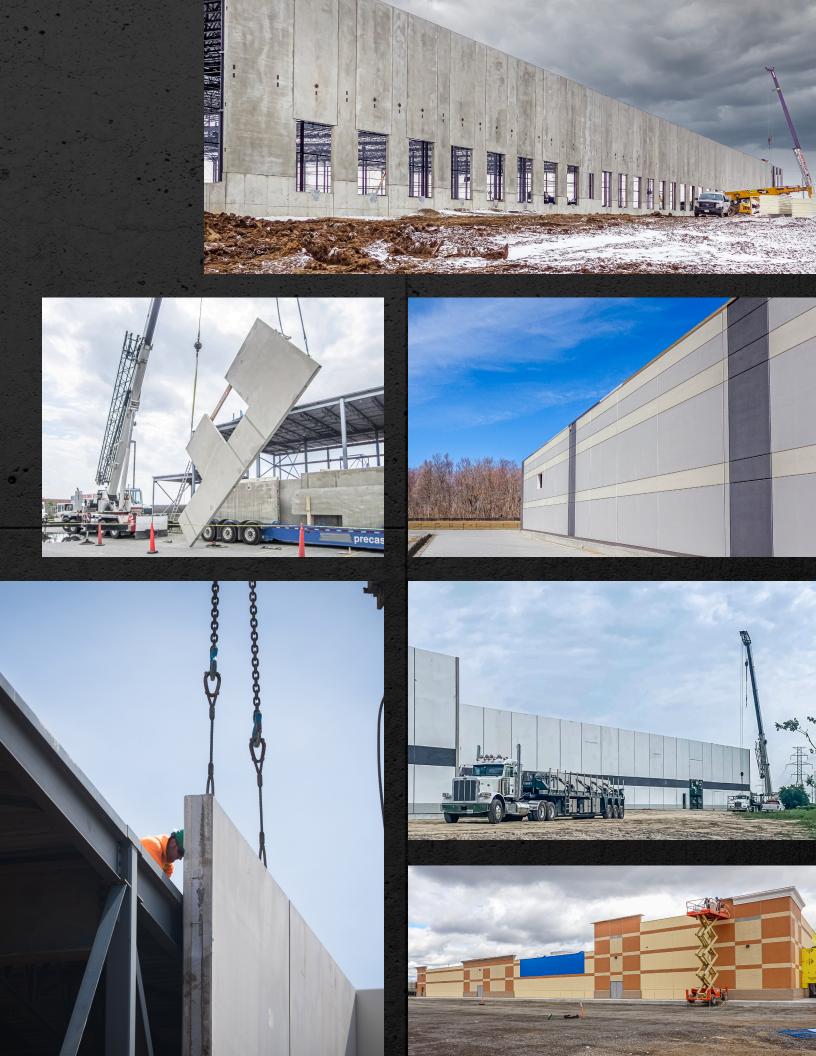

Stubbe's Precast Cladding Walls provide a clean, insulated building envelope that complements your structural system. Designed to enclose the building quickly and efficiently, they offer up to R-40 insulation and come with factory-applied finishes.

Benefits:

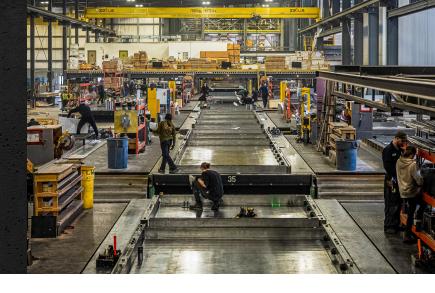

- Up to R-40 continuous insulation
- Factory-applied paint and window installation
- Faster building dry-in
- Simplifies site work with fewer trades
- Faster enclosure, earlier interior access
- Combines performance and aesthetics
- Union and non-union install crews available

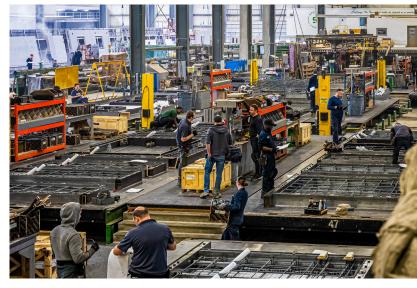

STUBBE'S PRECAST PRODUCTION

Plant 3 - Precision in Every Panel

At the heart of Stubbe's Precast operations is our Plant 3 facility in Harley, Ontario—one of three state-of-the-art plants on a 175-acre site featuring over 546,000 square feet of indoor production and support space. Dedicated to both structural and architectural precast concrete, this facility showcases the scale, efficiency, and craftsmanship behind every panel we produce. With highly trained crews and advanced equipment, Plant 3 ensures consistent quality and precision from design to delivery.

PRECAST FINISHES

Mold Liners, Coatings, and Stains

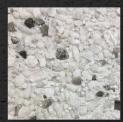

Micro Etch

Medium Sandblast White Cement

ABOUT STUBBE'S

About Stubbe's

Stubbe's is a family-owned and operated company with over 40 years of experience delivering innovative and reliable concrete solutions. What began as a small precast operation serving the agricultural market has grown into a diversified group of businesses offering a full range of concrete products and services across Ontario.

Driven by a commitment to quality, customer service, and forward-thinking solutions, Stubbe's is your one-stop provider for concrete construction—serving the agricultural, commercial, industrial, and residential sectors. Our operations include:

- Stubbe's Precast Structural and architectural precast concrete solutions
- Stubbe's Redi-Mix Ready-mix concrete delivery and batching services
- Stubbe's Cement Bulk cement supply
- Stubbe's Logistics Specialized transportation and delivery

With extensive in-house expertise and state-of-the-art facilities, Stubbe's continues to provide cost-effective, durable, and efficient building systems designed to meet the needs of modern construction.
